

Pre-Op Diet Guidelines Based on BMI

30-32	2 days clear liquids only
32-39	1 week including two days clear liquids
40-45	2 weeks including two days clear liquids
46-49	3 weeks including two days clear liquids
50-59	6 weeks including two days clear liquids
60+	8 weeks including two days clear liquids

General Overview

Aim for 2-3 meals of solid food, this will stay in your stomach longer keeping you full. You can use protein shakes as a supplement snack, generally, 1-2 protein shakes per day.

- **Protein powder/drinks:** You may purchase these at any health food store or many grocery stores. Please be sure it contains at least 20 grams of protein per serving and less than 5 grams of sugar.
 - Eat as many raw or cooked non-starchy vegetables as you want (no potato, corn, green peas, or squash).
 - Two 4-7oz servings of lean protein (chicken, turkey, fish, seafood, lean ground beef)
 - 1-2 servings of healthy fat (salad dressing, olive oil, nuts, avocado, olives).
 - 1/2 cup of fruit daily, try adding 1/2 cup of frozen berries or 1/2 banana to your protein shake.
 - You can make your shake with unsweetened vanilla almond milk or unsweetened coconut milk (no regular milk- too much sugar).

No bread, rice, pasta, tortillas, refined grains, sauces with sugar, and no dairy (milk, yogurt, cheese).

NO alcohol, marijuana, or THC products two weeks prior to surgery. These increase bleeding risk.

14 Days Prior to Surgery

- Discontinue all vitamins and supplements unless otherwise approved by your surgeon. This includes probiotics.
- Discontinue caffeine (coffee, black tea, green tea, energy drinks) and alcohol. Caffeine is a diuretic, may cause dehydration and is acidic.
 - Try decaffeinated coffee and teas instead.
- **Avoid:** Ginseng, Ginger, Garlic and Omega 3 supplements. These increase bleeding risk. You may consume small quantities of garlic and ginger in cooking.

7 Days Prior to Surgery

- Some medications may need to be discontinued before surgery depending on the instructions of your SURGEON.
- **Specific medications to STOP:** Coumadin, ANY ANTICOAGULANTS, OR BLOOD THINNERS Plavix, Aspirin, Ibuprofen, Motrin, Advil, Nuprin, Aleve, or any other non-steroidal anti-inflammatory medication. **Remember this also includes baby aspirin and most arthritis medications. As these can all cause stomach irritation and possibly more bleeding postoperatively.
- If there are any medications you need to stay on, talk directly with your coordinator to get an ok from your surgeon.
- Discontinue birth control and supplemental hormones (IUD'S AND IMPLANTS ARE TOTALLY SAFE and do not need to be removed).

For Diabetes Patients

- May continue to take medication up to the day of surgery. Be mindful, medications and amounts may change due to diet and weight loss change prior to surgery.
- **MUST** consult with their doctors about medication use.
- **MUST** check sugar levels at home. If sugar is above 150 call your primary care physician immediately.

2 Days Prior to Surgery: Begin Clear Liquid Diet

Consume only clear liquids.

- Apple or other clear juice without pulp or carbonation. (Honest Kids Juice is the lowest in sugar (10 g. per serving. If you get regular juice, use 100% real juice, and dilute with water, 25% juice/75% water)
- Clear broths: Chicken, Vegetable, or Beef.
- Water or Flavored Water.
- Sugar-free drinks such as crystal light, vitamin zero water, Powerade zero.
- Sugar-free protein waters are acceptable as well, such as isopure, premiere protein water, and Protein2O.

8 Hours Prior to Surgery

- Absolutely *nothing* to drink after midnight before surgery or 8 hours prior to surgery.
 - Absolutely NO medications unless directed by the doctor. (If you have been pre-approved to take any medications by your physician leading up to surgery, you may take small sips of water for swallowing.)
- Please bring ALL your prescribed medications (whether you are currently taking them or not) in properly labeled pharmaceutical bottles for documentation during Pre-Op testing. Do NOT take any medications after surgery until you have consulted with the doctor(s) and gotten approval.

Pre-Op Diet Approved Foods

Proteins	Vegetables	Fats
Grass-Fed Meat	Celery	Avocado
Lamb	Bok Choy	Olive Oil
90/10 Lean cut beef	Mushrooms	Coconut Oil
